

Laptop Computers for La Cuesta Graduates

Graduating students from La Cuesta High School who wish to move on to higher education are disadvantaged by the lack of access to a computer. They used the computers at the high school for assignments while they were enrolled but moving on to higher education those computers are not available to them. These students have surpassed many challenges to graduate and those same challenges often prevent them from financing the purchase of a computer. Our club has purchased 10 Dell laptops loaded with Microsoft Office for Students. The students who qualify (those who have elected to pursue a college education) will participate in a selection process that will include an interview and the assignment of a Rotary mentor. The laptops will be gifted to the students who are selected. Our club has adopted La Cuesta High School and this project will be repeated after this pilot effort has proven effective.
