IPC 3.1 Acute food insecurity classification

The Integrated Phase Classification (IPC) acute food insecurity scale classifies areas according to a five-phase scale of increasing severity.

Sub-national level data

- 1: Minimal
- 2: Stressed
- 3: Crisis
- 4: Emergency
- 5: Famine
- Outcomes may be worse than mapped, but limitations on information reduce the ability to confirm or deny
- Not mapped
- National Parks/Reserves

Symbols

- Urban settlement
- Settlement of displaced populations
- ! Would likely be at least one phase worse without current or planned humanitarian food assistance

Other

- Reporting country, no mapped data

Household Economy Approach (HEA)

Household Economy Analysis (HEA) produces a quantified summary of annual food, cash and expenditure for households in each wealth group of a livelihood zone.

Reference Year
Total Income
Hazard Effects
Total income drops when labor income is reduced because border closes.
After Coping
Total income in hazard year is still below reference year, despite coping.
% of minimum calorie needs
200
150
100
50
0
Households respond by selling more livestock.
Crops
Milk
Labour
Livestock sales
Petty trade
Brewing
