Rotary International
District 7490
Current or Planned
International Service Project Summary
Update of October 26, 2022

Club: Fair Lawn Sunrise Rotary Club

Project Name: Providing fresh water to 140 families in Juticalpa, Roatan Island, Honduras

Location: Juticalpa, Roatan Island, Honduras

Estimated Project Cost $80,000

Project Time Completion: Once we had raised all the monies we needed and we were approved by Rotary International Foundation, our first effort was to dig a well in Juticalpa. This was accomplished in

Summary of Project: Only 40% of the people who live in Juticalpa have access to clean, fresh water. This project is aimed at providing water, and then putting in a pipeline to each home in the town so that they can have water delivered directly to their homes. Before we started the project, residents had to go down the existing well, using pails, and bring the water back to their homes. There it was stored in open cisterns, leading to mosquito infestation and other unsanitary conditions. We broke down the tasks necessary to the following:

- Hydrology and engineering study, completed as of August 2022
- Dig a successful well in Juticalpa (Completed; well spurts out 75 gallons/minute) as of September, 2022)
- Cap the well and install a pump house (Completed as of October 15, 2022
- Paint and restore a water tower (January/February 2023)
- Build pipelines to each individual home (January/February 2023). Volunteers come to Juticalpa from different clubs.
- Bring in an expert to teach residents how to use the water properly. (Now in progress for four months)

If Looking for Partners or Participants in the Project, Identify Needs:

We have all the funding we need at this time.
