

TOGETHER, WE END POLIO

Annually our Rotary Club donates 250 Polio vaccine drops — five on behalf of each guest speaker — to PolioPlus, a program to help countries still afflicted by this highly infectious, incurable, and devastating neurological disease.

Back in 1979, Rotary International made the commitment to eradicate Polio. Since then Rotary members worldwide have contributed over \$2B and have immunized over 3 billion children in 122 countries. Without this ongoing program, it is estimated that over 200,000 children alone would be paralyzed or die from this disease each and every year. Without our continued efforts, this disease would once again spread rapidly across the world.
